WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Print standing on its back face (the face against the pack) so the four channels print as upright tunnels; 53 long, 88 wide, 31 tall.

Channels 15 wide x 7 tall, centred 31.25 mm each side of the centre line, 5.4 mm above and below the motor axis height; open at both ends.

Lightening pocket underneath between the channels, open at the bottom.

Inserts (M3, 5 mm): four in the back face (14 mm each side, 6 mm above and below the axis) for the pack screws; four in the front face (30 mm each side, 2.8 mm from the bottom and 2.5 mm from the top) for the cover screws.

Fits: back face flat on the pack front wall; channels line up with the pack's exit holes. Release plate and cover go on the front face.

Check: a 15 x 7 mm gauge slides the full length of every channel.
