WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut from 4 mm EVA foam: lay the shell on its side on the sheet and trace inside it, rolling it over; the flat pattern is a curved band 174 mm wide. Cut 2 mm inside the line and check in the shell.

Punch the 12 mm holes through the shell's holes once glued in place, so they line up.

Cut a 6.5 mm hole over each of the six screw heads so the foam lies flat.

Fits: glued to the inside of the shell with its own adhesive back, after the pack is screwed on (the screw heads sit in its holes).

Check: no foam stands proud of the shell edges; no screw head can be felt through the foam.
