WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

A plate 3 mm thick, 20 mm tall and 84 mm wide, with an 18 mm tab on the thumb side holding an 11 mm finger loop. Print it in red.

Two slots 1.6 mm tall run in from the little-finger edge to 36 mm past the centre, 5.4 mm above and below the motor axis height, so the plate slides off all eight tendons at once.

Fits: between the anchor block's front face and the cover, in the 3.4 mm gap the cover's four spacers leave; the pucks press it against the block. Pull the loop toward the thumb side to free it.

Check: with the cover screwed on, it slides out and back by hand.
